for new
puppy life!

Understand your dog better

Be prepared

Embark tests for over 200+ genetic health risks, giving you the power to prepare for—and even prevent—illnesses before they strike. Embark makes it easy to share your results with your vet, so the two of you can come up with a personalized plan to help your dog live a longer and healthier life. For example, genetic testing for the MDR1 gene mutation can warn against your dog receiving particular medications and doses. Knowing the risk for certain blood clotting disorders may help your veterinarian better plan surgical procedures.

Learn how to best care for your companion

Breed informs health

Some breeds are more prone to specific diseases, so it is vital to understand your dog's breed makeup and work with your vet to form a personalized preventative care and monitoring program. Luckily, Embark provides the most accurate breed composition test available.

Ongoing research and collaborative care

Genetic screening in dogs (and humans) is at the cutting edge of preventive care. Our mission is to improve the lives of all dogs and their owners. Embark's discovery team works hard to find new genetic breakthroughs to make sure that happens. When you test your dog, you can choose to opt in to research projects that help all dogs.

Advanced canine genetics at your fingertips

Genetic age, size, & weight

Is your pup going to stay this small or are you going to have to buy a saddle? Through a number of genetic markers, Embark can give you an estimate of your puppy's adult weight and uncover your dog's genetic age so you can understand how your pup actually grows. (Hint: Be prepared to throw out the 7 doggy years!)

Personalized care

Exceptional customer service is our signature. Ask us about anything before, during, and after your dog's Embark results are available. If a dog has a genetic health risk, we contact you personally to discuss this finding.

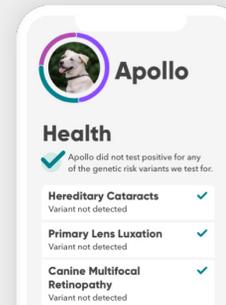

Discover the breeds in your dog

Using over **200,000** genetic markers, Embark accurately identifies more breeds and varieties than any other test on the market allowing you to create a personalized care plan for your dog.

Testing is easy

All we need from you is a saliva sample from your pup. No blood required! Our comprehensive online reports, email updates, and veterinary report allow you and your vet to easily access results.

It was great to see the results of our lab. Our vet was very happy to receive the info and said she wished more pet owners did the same thing.
